

Customer Journey Map

Date	27 June 2026
Team ID	SWTID-2026-4993
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	2 Marks

Customer Journey Map

This customer journey map for OptiCrop focuses on the experience of a commercial farmer

Phase of Journey	Stage -1: Discovery & Evaluation	Stage-2: Integration & Deployment	Stage-3: Optimization & Scaling
Actions What does the customer do?	- Identifies poor crop yield - Seeks expert farming advice - Discovers OptiCrop platform	- Opens OptiCrop web app - Enters N, P, K, pH, temp, humidity & rainfall values - Clicks "Get Recommendation"	- Receives best crop suggestion - Plans farming based on result - Shares results with community
Touchpoint What part of the service do they interact with?	- Agricultural extension officers - Peer farmer networks - Online farming forums	- OptiCrop HTML web form - Flask prediction backend - ML model result page	- Crop recommendation result - Confidence score display - Farming advisory output
Customer Thought What is the customer thinking?	"My crops keep failing" "I need data-driven guidance" "Is there a smarter way to choose crops?"	"This tool seems easy to use" "Will the AI prediction be accurate?" "Let me try entering my soil data"	"The recommendation makes sense" "This can save me money & effort" "I should use this every season"
Customer Feeling What is the customer feeling?	- Frustrated with losses - Anxious about next crop season - Hopeful for a solution	- Curious about the system - Slightly uncertain about AI accuracy - Optimistic about results	- Confident in decision - Relieved with clear recommendation - Motivated to adopt smart farming
Process Ownership Who is in the lead on this?	Agricultural Dept. & Farmer Community	OptiCrop System	Farmer + Agricultural Researchers

Opportunities How can we improve this stage?	• Promote OptiCrop via agriculture portals • Partner with govt. farming schemes • Add regional language support	• Add input validation & auto-suggestions • Show visual crop info alongside result • Enable offline mode for rural farmers	• Send seasonal crop reminders • Integrate weather API for live data • Cloud deployment for wider reach
